

Acme Cloud - Getting Started Guide

Acme Cloud is a cloud storage and team collaboration platform. This guide covers creating your account, signing in, and sharing your first files.

Creating an account

1. Go to the sign-up page and enter your work email address.
2. Choose a strong password, or continue with single sign-on (SSO) if your organization has it enabled.
3. Verify your email by clicking the link we send you.
4. Create your first workspace and invite teammates by email.

Signing in with single sign-on

If your administrator has configured SSO, click 'Sign in with SSO' and enter your company domain. You will be redirected to your identity provider to authenticate. Two-factor authentication (2FA) may also be required.

Uploading and organizing files

1. Open a workspace and click Upload, or drag files into the browser window.
2. Create folders to organize files; you can nest folders to any depth.
3. Use a shared drive when a whole team needs access to the same files.
4. Right-click any file to rename, move, download, or view its version history.

Sharing a file

To share a file, select it and click Share. You can invite specific people by email, or create a link. Link permissions can be set to view-only or edit, and you can require sign-in or set an expiry date.
