

Acme Cloud - Troubleshooting and FAQ

Common problems and frequently asked questions. If your issue is not listed, contact support from the Help menu.

I cannot sign in

First confirm your email and password are correct. If your organization uses SSO, use the 'Sign in with SSO' button instead of a password. If two-factor authentication fails, make sure your device clock is accurate, or ask an admin to reset your 2FA.

My upload failed

1. Check that the file is under your plan's per-file size limit.
2. Confirm you have enough remaining storage in the workspace.
3. Disable browser extensions that may block uploads, then retry.
4. For large uploads, use the desktop sync app instead of the browser.

Files are not syncing

Make sure the desktop sync app is running and signed in. Check that the workspace is selected for sync and that you have permission to the folder. Pausing and resuming sync often resolves a stuck file.

Frequently asked questions

Q: Can I recover a deleted file? A: Yes, deleted files stay in the trash and can be restored until the retention policy removes them.

Q: How do I get an API key? A: An admin can create one under Settings > Developer; see the Administrator guide.

Q: Does Acme Cloud support single sign-on? A: Yes, SAML and OIDC SSO are available on the Business plan.
